

# Automatic Film Applicator

Constant and defined film thicknesses are the precondition for the testing and analysis of coating materials and coatings. Many properties of these materials depend on the film thickness. Manual applications may have irregularities caused by changing the pressure or non-uniform drawing speed. This automatic film applicator ensures an accurate and reproducible application of coating materials, adhesives and similar products. Made with high precision components, sturdy mainframe and heavy duty power train to ensure a long term reliable operation.

## Features

- Big LCD touch screen, easy to handle, reliable results
- For use with almost all film applicators and wire bars
- Glass, vacuum and heated vacuum beds available

## Technical details

Test panel	300 x 420 mm
Stroke length	360 mm max.
Speed	10- 140/50-300 mm/s
Dimensions	68 x 60 x 27 cm
Net weight	40 kgs
Power	230 V/ 50 Hz

## Standards

ASTM D823
